

FLASH VESSELS RV

DESCRIPTION

The flash vessel is the main component in any flash recovery system. It can be used in all steam plants where high pressure condensate is reduced to a lower pressure, so that flash steam is formed by re-evaporation. Flash steam can be used in low pressure processes or heating equipment.

MAIN FEATURES

Several possibilities of installation and special sizes and types (available on request).

OPTIONS: Complete stainless steel construction.
Installation supports on body (without supporting feet).

USE: High pressure condensate.
Boiler blowdown heat recovery systems.

AVAILABLE MODELS: RV...A/S; RV...L/S – carbon steel.
RV...A/SS; RV...L/SS – stainless steel.
(A – angle; L – inline connections).

SIZES: RV06, RV08, RV12, RV16 and RV18.

CONNECTIONS: Flanged EN 1092-1 PN 16.
Special flanges on request.

INSTALLATION: Vertical installation with the flash steam outlet at the top.
Horizontal condensate inlet and vertical outlet (RV...A).
Horizontal condensate inlet and outlet (RV...L).
See IMI – Installation and maintenance instructions.

RV...A

RV...L

CE MARKING – GROUP 2 (PED – European Directive)

PN 16	Category
RV06 and RV08	2 (CE marked)
RV12, RV16 and RV18	3 (CE marked)

* For certified values, consult manufacturer. Volume and weight refer to EN flanged versions. Other versions may have slightly different values.

** As standard, in versions manufactured with EN 1092-1 flanges, these connections are female threaded ISO 7 Rp. In versions with ASME B16.5 flanges, these connections are female threaded NPT.

Remarks: Consult manufacturer for correct flash vessel selection and system design, including all the necessary equipment. Information such as condensate flow rate and temperature when arriving to the flash vessel as well as required flash steam pressure are mandatory for correct sizing.
